Assumptions

1	The sales forecast represents the overall sales of Wuxly Parkas in Germany.
2	**Winter Season in Germany:** December to February. (Fintiba GmbH)
2	**For the year 2024:** Wuxly is entering the German market in September 2024. The expected sales for September and October are comparatively low since Wuxly is newly entering the German market. In September, there are only 100 sales as Wuxly is newly entering the German market and it is not winter season. In October, sales slightly increased due to promotional campaigns. An increase in demand is anticipated starting in November and December since the winter season in Germany is approaching. This rise may result from the weather getting colder, increased consumer spending during the holiday season, Black Friday sales, and possible end-of-year promotions.
3	**For the year 2025:** **Quarter 1:** Due to the winter season, higher demand for Parkas, and the brand getting more established in the German market, sales are predicted to reach 8,000 units. **Quarter 2:** Expected sales will reduce to 3200 units as Germany will be exiting the colder season and gradually, there will be less demand for Parkas. During this, we can focus on stabilizing sales, implementing summer promotions, and participating in Expos and mid-year events to enhance product visibility and boost sales. **Quarter 3:** There would be a decrease in Q3 as the weather has changed to a hotter season and the demand for Parkas will be lesser across the market. **Quarter 4:** Sales are assumed to experience a high increase due to the Winter season in Germany approaching, and promotions during the season such as holiday sales, black Friday, and end-of-year sales.
4	**For the year 2026:** **Quarter 1:** The sales for Parkas are high because of the winter season, people tend to buy more winter jackets to stay warm in the cold weather. The increase in demand for winter wear (Parkas) is due to the season which is the coldest months of the year. The brand recognition of Wuxly is getting more established in the German market. **Quarter 2:** The sales are influenced by the transitioning weather, where customers still require winter jackets but sales will decline. **Quarter 3:** Sales further decrease due to the weather getting warmer. However, there are still a few sales, likely due to early fall purchases, clearance sales, customers traveling to places that might require a jacket, or other random sales. We can use the opportunity to focus on stabilizing sales and promotions and participating in Expos and mid-year events to enhance product visibility and boost sales. **Quarter 4**: This is the period when the weather is getting cooler and the winter season is approaching, which leads to an increase in demand. Also, this quarter includes significant shopping events like Black Friday sales, End-of-year sales, holiday purchases, etc. that will make consumers purchase Parkas and result in a substantial spike in sales.
5	**Reason for not changing price:** Maintaining a consistent price of $400 for the years 2024, 2025, and 2026 aligns with strategic objectives to build trust, enhance customer loyalty, and establish a strong brand presence in the market. By focusing on product quality, customer satisfaction, and operational efficiency, wuxly can sustain growth and achieve long-term success without the need to alter prices. Maintaining a consistent price helps to reinforce Wuxly Movement's brand as a premium, high-quality product. Frequent price changes can create confusion and harm the perceived value of the product.
